

DEPARTMENT OF STATISTICS

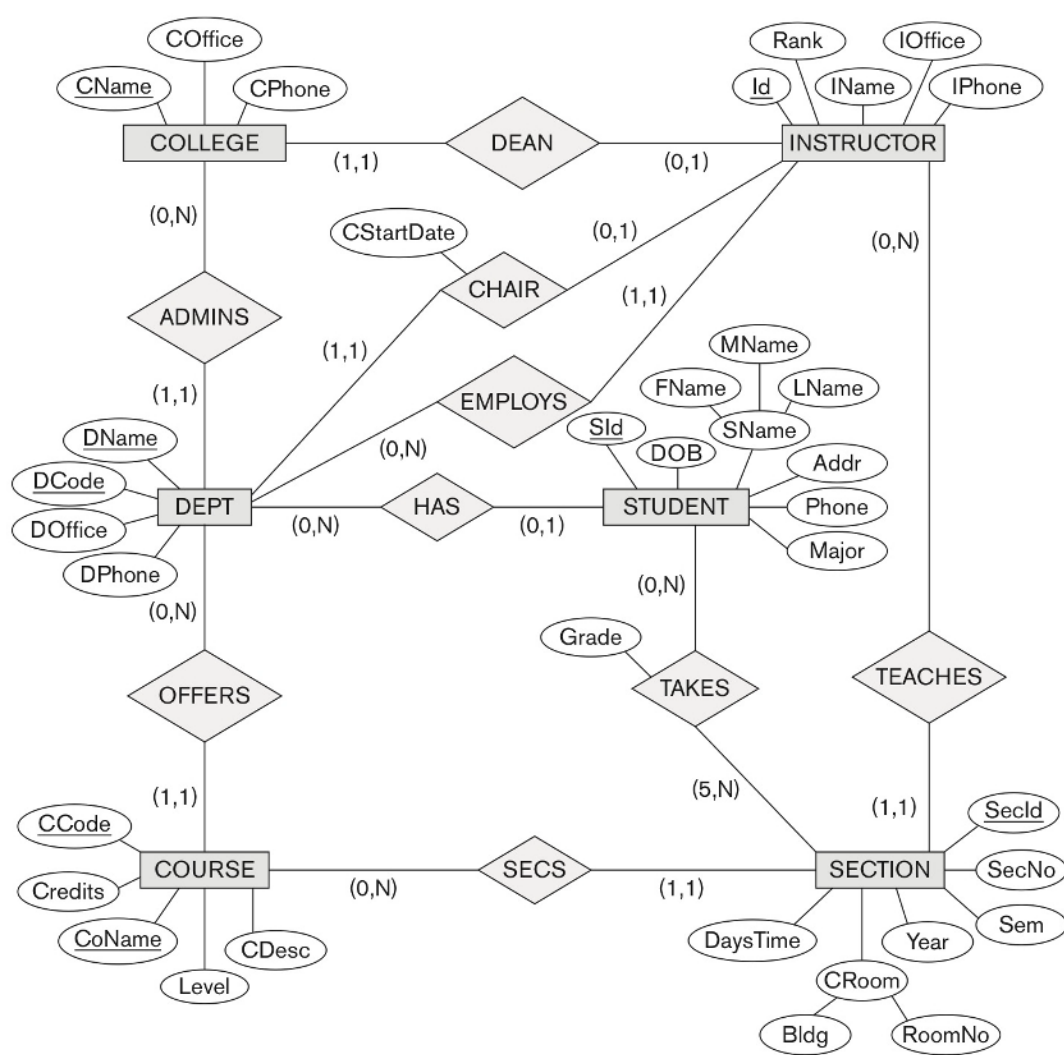

**ST207 – DATABASES**

Dr. Marcos Barreto

MT2021 – 2022

**WEEK 02 – ACTIVITY 1**

Consider the UNIVERSITY database depicted below. Build an ER schema for this database showing all entities, attributes, and relationships. Make sure to specify the type of each attribute, cardinalities and any other information as detailed in the figure. Feel free to adapt/change your model if you think necessary.

You can use the Web version of [draw.io](https://draw.io) or [download the Desktop version](#).

Any other ER modelling tool can also be used.
