ST207 – DATABASES
Dr. Marcos Barreto
MT2021 – 2022

WEEK 02 – ACTIVITY 2

For this activity, we will use the Northwind example database, adapted for SQLite. This database has been available for SQL Server and Microsoft Access for years. It was provided as a tutorial database for managing small business customers, orders, inventory, purchasing, suppliers, shipping, and employees.

Download the Northwind_small.sqlite (from the data folder) file. There is also a large database in the data folder.

Write SQL commands to answer the following:

1. List all product names and unit prices supplied by each company (supplier). Also list the supplier's name.
2. List the category of the 10 top-seller products.
3. List the details of the employee who have placed more orders.
4. For all customers, list all the products they bought.
